Platform	Windows
Operating System	Win 10
Browser	Chrome 104
Severity	Major
Assigned to	/
Priority	High

Description

When I try to sign up to create an account in the website, I keep getting error for any valid Zip/Postal code that I enter for a valid respective State.

Steps to reproduce

- > on the Home page click on Sign in
- > on the Authentication section > Create an account section
 - Enter an invalid email address (for example g@1.co)
 - Click on Create an account
- > on the Personal information Section
 - Fill the form with valid information and leave the email section as you entered previously
 - Click on submit button
- > You will get error message for the zip/postal code (see screenshot)

Expected result

The user should receive an error message regarding the wrong email address, not the zip/postal code.

Actual result

The form with valid data is not accepted and returns error.
